Progressive Shift to Competency Based Medical Education (CBME)

TSDA General Session
Jan. 20, 2023
Stephen C. Yang, MD

Agenda
- Background
- Entrustable professional activities (EPAs)
- Feasibility of CBME in Thoracic Surgery
You don't have to reinvent the wheel.

reliable, not valid
Very Brief History of CBME

- “Dean of American education of the 20th century”
- What purposes should a school seek to attain?
- What educational experiences can be provided to attain these purposes?
- How can these be organized?
- How can one determine whether these purposes are being attained?
1996
CanMEDS is released. This framework is refreshed in 2005 and 2015.

1999
The Accreditation Council for Graduate Medical Education and the American Board of Medical Specialties endorse a set of six core competencies

2009
The Accreditation Council for Graduate Medical Education launches the Next Accreditation System, which incorporates milestones into the core competency framework

2011

2012

2013

2014
A set of 13 Core Entrustable Professional Activities for Entering Residency is developed by a drafting panel convened by the AAMC. A 10-school pilot is established and runs through 2021.

2017
The AAMC begins its Competencies Across the Continuum Learning Series: New and Emerging Areas

2020
The Coalition for Physician Accountability endorses the six general but essential domains of competence as its common framework.
ACGME ABMS Competency Based Medical Education Symposium

August 11-12, 2022
Trainee/Educator Challenges

**Trainee**
- Knowledge gaps, unprepared for independent practice
- Existing methods of assessment and feedback not totally effective
- Some lack clear understanding of objectives
- Unclear when new abilities or skills are needed

**Educator**
- Struggle with in-training assessment tools
- Struggle with focused teaching activities, lack of clear learning objectives
- How to help the learner falling behind
ACGME’s Balance between
Rules-Based Compliance and Quality Improvement Tools
For Program Accreditation in the Next Accreditation System
CBME: Overview

• More than the six domains of clinical competency and Milestones: CBME next step in enhancement of education of each individual physician

• Advance curricular design and assessment while enhancing effectiveness in faculty evaluation

• May reward the better performers rather than constantly dwelling on those who need help
• No common agreement on a standardized set of expectations for graduating trainees
• Students/residents entering training have vastly different skill sets and training experiences
• PD concerned that some trainees are not prepared for practice
Why transition to CBME?

- Current surrogates for competency:
  - Case logs
  - Milestones
  - Test performance
  - PD’s attestation
  - Time-based performance (rather than objective demonstration of competence)

- What we have now to access competency:
  - Simulation
  - Operative feedback tools
  - Skills/cognitive curricula (e.g. FLS)
  - Entrustable professional activities (EPAs)
  - Video assessments

Current assessments have not kept up with competencies…

What are EPAs?

- “An essential task that an individual can be trusted to perform independently in a given context.”
- Popular assessment component of CBME

AAMC EPAs for Graduating Medical Students

1. Gather a history and perform a physical examination.
2. Prioritize a differential diagnosis following a clinical encounter.
3. Recommend and interpret common diagnostic and screening tests.
4. Enter and discuss orders and prescriptions.
6. Provide an oral presentation of a clinical encounter.
7. Form clinical questions and retrieve evidence to advance patient care.
8. Give or receive a patient handover to transition care responsibly.
9. Collaborate as a member of an interprofessional team.
10. Recognize a patient requiring urgent or emergent care and initiate evaluation and management.
11. Obtain informed consent for tests and/or procedures.
13. Identify system failures and contribute to a culture of safety and improvement.

The General Surgery EPAs

The ABS has been hard at work since the conclusion of the pilot in 2020, 18 core EPAs that will be evaluated for general surgery:

1. RLQ pain/Appendicitis *
2. Benign or malignant breast disease
3. Benign or malignant colon disease
4. Gallbladder disease *
5. Inguinal hernia *
6. Abdominal wall hernia
7. Acute abdomen
8. Benign anorectal disease
9. Small bowel obstruction
10. Thyroid and parathyroid disease
11. Dialysis access
12. Soft tissue infection
13. Cutaneous and subcutaneous neoplasms
14. Severe acute or necrotizing pancreatitis
15. Perioperative care of the critically ill surgery patient
16. Flexible GI Endoscopy
17. Evaluation/initial management of a trauma patient *
18. Provide general surgery consultation *

Example EPA from ABU

ENTRUSTABLE PROFESSIONAL ACTIVITIES FOR UROLOGY (2018)

Urology: Core EPA #2

Performing an initial consultation, and developing a plan for investigation or management, for patients presenting in the clinic or inpatient non-urgent settings

Key Features:
- This EPA focuses on the initial assessment of patients with non-urgent conditions, and builds on the skills of Foundations to include patients with more complex presentations and/or diagnoses

Assessment Plan:
Direct or indirect observation (case review) by supervisor

Use Form 1. Form collects information on:
- Presentation: complex UTI; cutaneous genital lesions; male infertility; genital and/or pelvic pain; adrenal mass; suspicious renal mass; suspicious scrotal mass; elevated PSA
- Complexity: low; high

Collect 10 observations of achievement
- At least 6 different presentations
- At least 5 high complexity
- At least 3 assessors

Relevant Milestones:
1 ME 1.4 Perform clinical assessments that address all relevant issues
2 ME 2.2 Administer and interpret disease specific questionnaires, as appropriate (e.g. erectile dysfunction)
3 ME 2.2 Identify and interpret pertinent findings on physical examination
4 ME 2.2 Identify indications for, and interpret, specialized tests
5 L 2.1 Use clinical judgment to minimize wasteful practices
6 ME 2.2 Integrate the patient’s other medical problems, overall functioning and current health status into the decision regarding plan of care
7 ME 2.4 Stratify risk for clinical progression/recurrence and identify patients that need further investigation (e.g. biopsy) and/or surgical intervention
8 S 3.4 Integrate best evidence and clinical expertise into decision-making
9 ME 2.4 Develop and implement a plan, which may include further investigation, surveillance, medical treatment and/or surgical intervention
10 ME 4.1 Determine the necessity and timing of referral to another health care professional

Proposal for Feasibility of CBME Thoracic Surgery

- Align EPAs with Core Competencies, Milestones and KF exam
- ABTS-organized “EPA Council” to discuss CBME, development of EPAs, methodologies of competencies for evaluation and certification
- Balanced group of subspecialties (cardiac, general thoracic, congenital, critical care) and representing:
  - ABTS
  - ACGME/TS-RRC
  - TSDA
  - TSRA
  - Diplomats 1-5 yrs out
  - ABS rep (Brenessa Linderman)
  - Susan Moffatt-Bruce
"Personal" Vision for EPAs in Thoracic Surgery

- Core Domains
  - Foundations (basic procedures)
  - Consultations (in- & out-pts)
  - Operative Techniques
  - Teaching
  - Scholarly Work
  - Transition to Practice

- Specialty Domains
  - Level 5 Milestones
Perception of EPAs

• Strengths:
  - EPA development roadmap has been done by ABS
  - Partner with ABS EPAs – IT support via SIMPL (John Mellinger)
  - Available resources

• Challenges:
  - Cost
  - More intense/robust assessments
  - Faculty development/overwhelmed
  - Acceptance in community
  - Developing competent/early/partial board certification
  - Competencies not covered by EPAs
  - Tying curriculum to EPAs
  - Filling gaps in variation of clinical experience
  - Billing/by-in from MC/insurance co
Summary - CBME

• EPAs - natural progression from medical school to general surgery residency
• Start planning strategies for CBME with other stakeholders – incorporating CC, MS, KF, video assessments, and development of EPAs
